

Software Design Document (SDD) Template

1. Introduction

Introduce your system, state the purpose of the document, its scope, and intended audience.

1.1 Purpose

Describe why this document exists and what it covers.

1.2 Scope

Define what the system will do and what is outside its boundaries.

1.3 Intended Audience

Identify who will use this document.

1.4 Definitions and Acronyms

List important terms and abbreviations.

2. System Overview

Explain without details your system and its major components.

3. Design Viewpoints

Show the system design models from different perspectives.

3.1 Context Diagram

Display your system and the other systems in its environment.

3.2 Use Case Diagram

Show the interactions between your system and users/ other systems. Other tables or diagrams may be required to explain the diagram.

3.3 Sequence Diagrams

Show the sequence of interactions that take place between the system components during a particular use case.

3.4 Class Diagram

Show the classes and their attributes and methods, and the relationships between classes.

3.5 State Diagram

Show how your system responds to external and internal events and moves from one state to another. Other tables may be required to explain the diagram.

4. Data Design (ER Schema Diagram)

Represents the database entities and the relationships between these entities. Show the data field of each table.

5. User Interface Design

Put the UI layout and screenshots of your system.

7. Project Plan

State the timeline, phases, and the milestones of your project.

8. Task Distribution

Show in table the responsibilities among team members.
